

# PE SACKS AND FILMS

## Fields of application:

- packing crops, fodder, fertilizer and other bulk goods
- lining sacks
- refuse sacks
- cover films in agriculture
- coloured sign-bands

## Standards, permissions:

- OÉTI 5840/1996

## Make-up:

The materials used for the manufacturing of sacks and films can be the following:

- low density soft PE
- low density linear PE
- regran
- colour materials, additives.

The regran material used is manufactured by our company. PARTIUM'70 Rt. has a significant waste film recycling capacity, which provides regular raw material of almost the same strength characteristics as the original material made through several-staged cutting up, washing and filtration operations.

There is a wide range of size assortment suited to the customers' requests.

## Sack sizes

- width:
  - gusseted: 300 x 500 mm – 760 x 1,300 mm
  - non-gusseted: 350 x 750 mm
- length: 250–1,300 mm
- thickness: 35–200 microns

The sacks and films can be manufactured according to the colour and the flexographical printing requested by our customers.

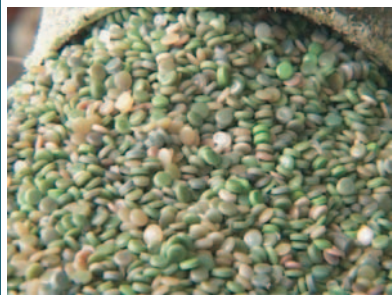

## Features of the soft PE sacks and films:

- possess appropriate strength features
- are not brittle even under low temperature conditions
- environment-friendly, recyclable, waterproof
- can be welded easily

## Transportation and storage:

On EUR pallets (3,000 pcs. of sacks per pallet).

In case of storage in the open air the film products should be protected from direct sunshine.
